THE CALBRITE™ DIFFERENCE

OUR HISTORY

The Calbrite™ heritage dates back to 1917 with the founding of Jackson-Markus Supply by Peter Markus, the grandfather of Dan Markus, president of Calpipe Industries, the parent company of Calbrite. Jackson-Markus Supply manufactured and distributed flow control products, plumbing fittings and construction materials. In the early 1960s, the family expanded into stainless steel and nickel alloy weld fittings, servicing a rapidly-growing market in refining, petrochemical, food processing, breweries, marine and other industries. Recognizing the similarities between the plumbing, PVF and electrical industries, Dan Markus founded Calpipe Industries in 1986 to focus on the electrical industry. Today, Calpipe Industries manufactures and distributes electrical conduit and fittings under the brand names of Calconduit and Calbrite. The company also expanded into security bollards, marketed through Calpipe Security Bollards.

Headquartered in Hammond, IN, Calbrite is the leading name in stainless steel conduit systems for harsh and corrosive environments. We offer the largest stainless steel conduit systems product line in the industry, manufactured to strict guidelines set forth by UL and NEMA, and many of our products are ARRA-compliant.

Calbrite supports our customers through:

- The industry's broadest and deepest product offering. We currently offer more than 2800 SKUs, ensuring you that we can support just about any customer's stainless conduit system need.
- A customer-centric product development process. Simply put, we listen to our customers and quickly deliver solutions designed to meet their needs.
- For example, our new in-use box was developed for a large food-processing manufacturer that had requested a hinged single gang box cover in stainless steel that was both lockable and weatherproof for wash-down environments. We are known for developing products for customers to address their specific needs, and then offering the solution to the industry.
- A national network of independent sales agents across North America. To find the rep nearest you, visit www.calbrite.com/replist.
- Manufacturing and distribution centers in Hammond, IN; Downey, CA and Odessa, FL to service our distributors and their customers throughout the U.S. and Canada.

OUR COMMITMENT

At Calbrite, we are dedicated to providing our customers with quality stainless steel conduit and fittings, delivered on a timely basis, that consistently meet expectations and industry standards.

OUR QUALITY ASSURANCE

Our quality assurance program complies with industry standards established by Underwriters' Laboratories (UL), ANSI, and NEMA.

UL listings: 

- Our approval file number for ferrous electrical conduit is E226472.
- Our approval file number for non-ferrous electrical conduit is E230584 (issue #26KT)

Many of our products are produced to NEMA 4X standards, which ensure protection against corrosion, wind-blown dust and rain, splashing water, hose-directed water and damage from external ice formation in outdoor or indoor environments.

THE BENEFITS OF STAINLESS STEEL

CORROSION IS COSTLY.

Stainless steel is the highest quality, most durable, easiest to install, UL-approved conduit material available. Corrosion damages equipment which results in downtime and expensive maintenance and repairs. Stainless conduit systems, designed for harsh environments, are the material of choice due to:

- Corrosion-resistance. Both 304 and 316 stainless steel alloys provide excellent resistance to a wide range of corrosives, at extreme temperatures and in most industrial environments. When scratched, stainless steel's exposed metal "self-heals", oxidizing over the abrasion to protect against further corrosion.
- Longevity. Stainless steel conduit's durability, sometimes up to 50 years, reduces the need for costly maintenance or replacement needs, providing long-term protection of your facility and improving your equipment investment.
- Lowest total cost of ownership. In many applications, stainless steel has a lower maintenance cost and the lowest total life cycle cost than any other UL-approved conduit material. Coupled with stainless' longevity, facility downtime due to conduit replacement is minimized.
- Environmentally-friendly. Stainless steel retains structural and anti-corrosive properties in temperatures ranging from cryogenic to hundreds of degrees and does not burn and emit dangerous smoke and carcinogens. Additionally, stainless steel can be recycled.
- Ease of installation. Calbrite™ stainless steel conduit and fittings do not require installers to use special tools or labor-intensive procedures for installation. And stainless is in full NEC compliance for all facilities.

WHAT DOES THIS MEAN TO YOU?

Stainless steel provides a reliable, durable conduit that ensures uptime, increases productivity, and provides a long service life in industrial and commercial applications. In short, stainless steel offers a significant cost savings over alternative conduit and fittings. This is why stainless is the first choice for applications in hospitals, kitchens, clean rooms, potable water or beverage & food processing plants, petrochemical & refining facilities, pulp & paper production, wastewater treatment plants, mining, and other facilities with stringent requirements.

WHY CALBRITE™

Calbrite is the leading name in stainless steel conduit systems. We offer the largest stainless steel conduit systems product line in the industry, manufactured to strict guidelines set forth by UL and NEMA, and many of our products are ARRA-compliant. Calbrite supports its customers throughout the US and Canada from three distribution centers in the US. Calbrite is committed to providing quality products, the fastest delivery possible, and friendly, personal, and reliable service to our customers.

CALBRITE™ STAINLESS STEEL VS. ALUMINUM?

- Stainless steel conduit and fittings have up to five times the strength of aluminum and will last several times longer.
- Stainless steel holds up against the same wash-down procedures and products that all installed stainless steel processing equipment stands up to whereas aluminum cannot.

CALBRITE™ STAINLESS STEEL VS. PVC-COATED?

PVC Coated:

- Requires special installation tools, unlike stainless steel
- Toxicity may make it undesirable for food & potable water
- Potential "frequent" repairs
- If damaged, causes galvanized conduit to be exposed directly to corrosive environment
- Is not considered to be recyclable – stainless steel is 100% recyclable

To learn more, or to get fast, reliable service and quality stainless steel conduit and fittings at competitive prices please contact us.

Calbrite™ stainless steel rigid conduit is manufactured in type 304 & 316 stainless to meet stringent sanitary requirements and withstand harsh corrosive environments. The conduit is polished to a bright, easily maintainable finish that allows for minimal cleaning, enhances the appearance, and improves the surface's resistance to pitting & bacterial corrosion in CIP (clean-in-place) and SIP (sterilize-in-place) systems.

Calbrite stainless steel rigid conduit is highly resistant to damage from impact. Easy to cut, form and join, stainless steel conduit avoids the labor-intensive procedures that come with PVC-coated installation. No special tools or complicated maintenance and repair procedures are required. In addition to the ease of installation and maintenance, stainless steel is 100% recyclable. Standard rigid conduit threads allow for trouble-free installations.

* Trade sizes 1/2" to 4"

* Includes one coupling with each length purchased

* Custom lengths and diameters are available

* Conduit is domestically manufactured in our U.S. manufacturing facilities

Calbrite™ stainless steel light wall conduit is equivalent to a non-threaded stainless IMC conduit. Calbrite light wall conduit is more impact resistant compared with EMT and is 100% recyclable. Stainless steel light wall is often specified in corrosive environments where it is subjected to harsh chemical treatments or wash-downs due to its lighter weight, precise tolerances, and ease of installation.

Light wall conduit is manufactured without threads, and is joined together by utilizing compression fittings simplifying installations and lowering costs. Light wall conduit is easily cut and bent using standard tools.

- * Custom lengths are available
- * Trade sizes ½", ¾", 1", 1-1/2", 2"

Compliances: Manufactured to the highest standards of the American National Standards Institute (ANSI) and Underwriters Laboratories (UL).

Calbrite stainless steel EMT conduit and fittings combine strength with ductility, resulting in a lightweight and easy-to-handle conduit assembly. EMT can be installed indoors and outdoors in accordance with NEC®, providing it will not be subject to severe physical damage during and after installation.

Calbrite stainless steel EMT provides superior performance in applications subject to corrosive environments, harsh chemical treatments, and required wash-downs. In addition to the ease of installation and maintenance, stainless steel is 100% recyclable. Calbrite EMT enhances the appearance and the surface's resistance to pitting & bacterial corrosion in CIP (clean-in-place) and SIP (sterilize-in-place) systems.

- * Trade sizes ½" – 2"
- * Conduit is domestically manufactured in our U.S. manufacturing facilities

Calbrite stainless steel EMT is manufactured to UL797 standards and meets ANSI C80.3
