- Orders must specify the standard package quantity (Std. Pack) or multiples of that quantity.
- These maximum current values assume the use of insulated copper conductors with $75^{\circ} \mathrm{C}$ temperature rating and are calculated based on NEC Article 310, Table 310-16. In most cases this value is the maximum ampacity of the wire which has the greatest current carrying capacity. The actual allowable current for a particular application depends on the size, insulation class, and other characteristics of the wire used. The UL ratings are shown. The CSA rating may be higher or lower. Refer to the catalog for CSA ratings.
- One end-barrier is required for each assembly of like blocks.

Table 24.11: Lug/Lug and Lug/Clamp, AB1

- Orders must specify the standard package quantity (Std. Pack) or multiples of that quantity.

These maximum current values assume the use of insulated copper conductors with $75^{\circ} \mathrm{C}$ temperature rating and are calculated based on NEC Article 310, Table 310-16. In most cases this value is the maximum ampacity of the wire which has the greatest current carrying capacity. The actual allowable current for a particular application depends on the size, insulation class, and other characteristics of the wire used. The UL ratings are shown. The CSA rating may be higher or lower. Refer to the catalog for CSA ratings.

- One end-barrier is required for each assembly of like blocks.

Insulation Displacement Style Terminal Blocks and Accessories

5 mm (0.20 in.) wide AB1AA135U4

- Insert wires without stripping
- Available for wire sizes 30-14 AWG
- DIN 3 rail mounting
- Finger safe connections

## Standard Terminal Block Assemblies

The assemblies listed in the table below consist of 6 ft (two 3 ft lengths packaged together) of terminal blocks. The terminal blocks are mounted on snap-off mounting track, which can be easily broken every $5 / 16$ in. Every tenth terminal block is marked to aid in counting off the proper number of terminal blocks. After adding the proper end barrier and a slip-in end clamp to the blocks that were broken off, the custom assembly is ready for installation.

Table 24.19: Standard Terminal Block Assemblies

| Description | Type | \$ Price |
| :--- | :---: | ---: |
| Assembly of 188 Type GA6 | GA6188BC | $\mathbf{5 3 0 . 0 0}$ |
| Assembly of 204 Type GR6 | GR6204BC | $\mathbf{6 7 4 . 0 0}$ |
| Assembly of 94 Type GF6 | GF694BC | $\mathbf{1 3 1 1 . 0 0}$ |
| Assembly of 296 Type GM6 | GM6296BC | $\mathbf{8 3 0 . 0 0}$ |
| Assembly of 188 Type GP6 | GP6188BC | $\mathbf{6 5 3 . 0 0}$ |

## Custom Terminal Block Assemblies

Order an assembly built as required for the application. As standard, custom assemblies use 9080GH mounting track with screw on end clamps. Other options are available from the table below.
One terminal block type: The number of blocks in the assembly is added to the end of the catalog number of the desired block. Example: an assembly of 25 9080GR6 blocks would be 9080GR625.
More than one terminal block type in an assembly: A detailed drawing or sketch of the desired assembly must accompany the order.

4 These maximum current values assume the use of insulated copper conductors with $75^{\circ} \mathrm{C}$ temperature rating, and are calculated based on NEC Article 310, Table 310-16. In most cases this value is the maximum ampacity of that wire or combination of wires (as listed in the above table) which has the greatest current carrying capacity. The actual allowable current for a particular application depends on the number, size, insulation class, and other characteristics of the wires used.

- Discount schedule CP5.

## Selection

To properly select a Class 9080 Type GCB circuit protector, follow these steps:

1. Determine the inrush correction factor from Table 24.28.
2. Determine the temperature correction factor from Table 24.29.
3. Determine the sealed current of the load that is being protected.
4. Multiply the sealed current by the two correction factors and choose the closest circuit protector.
Note: Choosing a circuit protector with a value lower than the calculated value might cause nuisance tripping, while choosing the larger might provide a protector that will not properly protect the load.
$\begin{array}{cc}\text { File } & \text { E152841 } \\ \text { CCN } & \text { QVNU2 }\end{array}$ QVNU

C $\epsilon$

Example: Solenoid with sealed current of 0.75 A, an inrush ratio of 1:6, and in an ambient temperature of $85^{\circ} \mathrm{F}: 0.75 \times 1.5 \times 1.05=1.18$ Choose the 1.2 A protector
Tripping Time: Tripping time of the circuit protector is determined from Table 24.30. Divide the circuit protector value by the temperature correction factor from Table 24.29 to determine actual rated current referenced in Table 24.30.

Table 24.28: Table A-Inrush Ratio Correction Table
Note: For resistive loads, use inrush correction factor of 1.0.

| Inrush Ratio | $1: 1$ to $1: 4$ | $1: 5$ | $1: 6$ | $1: 7$ | $1: 8$ |
| :--- | :---: | :---: | :---: | :---: | :--- |

## Application Data

Voltage Rating-Class B \& C-600 V
Blocks are rated based on NEC Table 310-16 using $75^{\circ} \mathrm{C}$ wire.
Aluminum blocks are tin plated high conductive aluminum. Copper blocks are tin plated high conductive copper.
Housing material:

- Miniature Blocks are made from high impact thermoplastic rated at $125^{\circ} \mathrm{C}$. max. \& $-40^{\circ} \mathrm{C}$. min.
- Full Size Blocks are made from general purpose phenolic rated at $150^{\circ} \mathrm{C}$. max. \& $-40^{\circ} \mathrm{C}$. min.

All blocks have a flammability rating of UL 94V-0.
Most blocks have a short circuit current rating for UL508A up to 200 kA for branch circuit applications. For the actual ratings, see catalog 9080CT9603R9/08.
$\star \quad$ These covers must be ordered in multiples of 5 . Each cover comes with two self-tapping screws.

- Will not work on a 9080LBA362106 block.

maximum operating temperature $130^{\circ} \mathrm{C}$
Clip material:
- All 30 and 60 A fuse clips are copper alloy tin plated
- All 100 and 200 A fuse clips are one piece aluminum with copper spring tin plated.
- All Class $\mathrm{H}, \mathrm{R}$ and J fuses are standard with reinforced fuse clips.
Lug termination:
- All 30 A blocks have pressure wire connectors.
- All 60,100 and 200 A blocks have box lug connectors.

Approvals:

- The Type M fuseholders are UL component recognized (File E40747 CCN IZLT2).
- The Type H, R, J and CC are UL Listed (File E40747 CCN IZLT).
- All fuseholders are CSA certified (File 70360 Class 6225-01).
Flammability rating of all FB fuse blocks is UL 94V-0.
RoHS Compliant

Advantys TELEFAST 2 Product Features

NOTE: Not all features available on all modules.

The TELEFAST 2 system is a set of products for the rapid connection of I/O modules ( 24 Vdc discrete, analog and counters) to Various control circuit components. These components act as a substitute for screw terminal blocks, remotely locating and partly eliminating the single wire connections. The system connects only to channels with HE10 and SUB-D connectors, or to standard terminal blocks with a cabled connector.
Variations within the listing of modules include those with and without relays (electromechanical and solid state), analog and counter modules, and special function modules.
Pre-wired cables available allow you to connect directly to:

- Schneider Electric (Modicon ${ }^{\text {TM }}$ family)
- TSX Premium ${ }^{\text {™ }}$
- TSX Micro
- TSX Series 7
- Twido
- Quantum ${ }^{\text {TM }}$
- Compact
- April S5000/7000
- NUM1020/1060
- Siemens
- S7-200/300/400
- S5-95U to 155 U
- Allen-Bradley
- SLC500

In addition, other accessories include:

- I/O simulators
- Continuity blocks
- Label marking software
- Splitter bases (16, 23, and 32 channels)
- Mounting kits
- Detachable terminal strips
- Wiring pass-through connectors
- Fuses
